To whom this may concern:

As a working professional, I have always enjoyed pushing my skills outside of my day to day job. Whether that be working on web development on a site like this, or reaching out to California hockey players to expand my coaching business, I never want to be trapped in a box regarding my future.

With my four years at UC Santa Cruz, I enjoyed learning many different engineering skills before honing in on database management and data modeling. Now reaching my second year as a Business Analyst at Leidos, I have been challenged far more than college ever did, but am very happy with the actionable insights and reporting dashboards that I have created for high level executives and customers within the company.

Holistically, I want to bring my skills as a Business Analyst to assist with enterprise data transformation, to change the way users view their information, and really bring it to life on a webpage or dashboard, getting away from the “data-dump” mentality many folks have. Leidos and many other big tech companies have been extremely appealing to me because of this during my professional career. Now that I can provide value to my goals, bringing Big Data to impact data driven decision making and using it to tell a thorough story, I am loving being able to continue working alongside incredibly talented peers, with the possibility to enrich my knowledge.

Personally, I believe that I can bring youthful expertise in pioneering data modeling, as well as great knowledge and use of products from the Oracle stack. I have really grown as a professional in my first two years at Leidos, studying up on ETL processes of an amazing intelligence company, and want to continue being able to apply myself in this role, while expanding my skillsets for whatever the future holds.

If you have any questions at all, feel free to contact me at (858)-335-8915 or email me at [makj1997@gmail.com](mailto:makj1997@gmail.com). Thank you for your time.

Sincerely,  
Junyan Mak
